THE NEW AND ORIGINAL....

Tip and liner clamp for violin, viola, cello and bass bows

- ***Repair tool for gluing of bow tips and liners***
- ***Suitable for violin, viola, cello and bass bows***
- ***Fully adjustable for perfect alignment of clamp to eliminate slippage while gluing***
- ***Cork lined to protect bow finishes***
- ***Provides 360° full visual and physical access to the entire perimeter of the bow tip to check and adjust alignment of parts while gluing***
- ***Perfect for regluing existing loose bow tips to ensure precise alignment***

INSTRUCTIONS

- *Check contents of package to ensure that the following items are included... Bow tip Clamp with swivel hoop, adjustment screw and 4 raw shoes. See Photo F*
- *Prepare bow and tip for gluing, ensure surfaces are clean of all old glue and residue.*
- *Clamp bow gently into a padded bench vice with bow head tip facing upward. See Photo A*
- *Clamp **REZX™** Tip and Liner Clamp to the underside of the bow shaft such that the nose of the bow is approximately even with the front end of the **REZX™** Tip and Liner Clamp. See Photo B*
- *Swing swivel hoop on **REZX™** Tip and Liner Clamp up and over the bow tip, and ensure the clamp screw is in approximate straight alignment with the bow head. Rotate bow shaft in clamp as necessary. See Photo C*
- *Shape the sole of the clamp shoe to match the curve of the bow tip See Photo D. A spindle sander works well for shaping. You may need to shape the perimeter of the shoe to be slightly smaller than the bow tip to aid in alignment while gluing. Note that gluing a 2 to 3mm layer of cork or balsa to the shaped clamp shoe will help to take up any minor gaps that may be left after shaping the shoe to match the bow tip*
- *Apply glue to both surfaces being glued*
- *Place clamp shoe on tip liner, screw the adjustment screw down against the clamp shoe to desired pressure. See photo E*
- *Check and adjust alignment of bow tip as necessary, let set.*
